EDUCATION

University of Toronto

Bachelor of Science, Computer Science — Minors: Mathematics & Statistics

Toronto, ON

Sep. 2024 – Apr. 2028

WORK EXPERIENCE

Software Engineer Intern

Jun. 2026 – Aug. 2026

Spruce InfoTech Inc.

- Engineered AI-powered sales automation system utilizing LinkedIn crawling agents an agentic system architecture with 17 agents to streamline lead prospecting and personalized campaigns for targeted outreach
- Delivered a colour-based search feature with Gemini image processing APIs; eliminated sequential blocking in background cutout analysis, cutting image processing time by 50%
- Spearheaded internal AI adoption by leading workshops on Claude fundamentals and completing the Claude Architect Certification, allowing the company to qualify for the Claude Partner Program

Software Engineer

Apr. 2025 – May 2026

Bibber Technologies Inc.

Summer - Full-time; Fall & Winter - Part-time

- Engineered core Android app features in Kotlin (profile, map, AI chatbot, feed), implementing a pre-loading system that reduced perceived scroll load time by 80% and refactoring navigation for seamless role-switching
- Architected 15+ RESTful API endpoints with full contracts to enable parallel full-stack development and designed system architecture diagrams that streamlined onboarding for new engineers
- Built secure JWT and phone 1FA authentication flows in Nest.js while leading UI/UX research across 5 prototypes, driving 2 major interface redesigns to optimize user onboarding

Machine Learning Intern

Sep. 2025 – Jan. 2026

Ontario Institute for Studies in Education - BalanceAI

- Supported implementation of predictive models for student fluency assessment as part of research team using NLP techniques in python and rule-based feature extraction
- Contributed to ML scoring system implementation that reduced manual grading time by 97% for 500+ responses

PROJECTS

UofT Launchpad | *Next.js, Typescript, React, Gemini API, Supabase, PostgreSQL, Tailwind CSS*

[Link](#)

- Engineered a student platform for 30+ first-year mentees featuring grade forecasting calculators, meal plan pacing trackers, and campus guides, translating student pain points into solutions
- Built an automated syllabus parser that extracts text from uploaded PDF course outlines using AI extraction to convert course outlines into grading schemes, eliminating manual data entry
- Designed relational database tables and row-level security policies to securely store student profiles, course weightings, and personal term budgets

Elefrench | *Express.js, TypeScript, React, Gemini API, Supabase, PostgreSQL, Tailwind CSS*

[Link](#)

- Designed and deployed a full-stack learning platform utilized regularly by French tutoring clients, implementing secure authentication, protected routes, and interactive UI feedback for 1–8 students
- Built a dynamic AI quiz generation pipeline with an in-memory caching layer that eliminated redundant API calls during retries and significantly reduced response latency
- Architected an adaptive difficulty calibration engine backed by user performance tracking across 4 core skills, dynamically adjusting quiz complexity based on historical scores

LEADERSHIP EXPERIENCE

Computer Science Peer Mentor, UofT First-Year Learning Communities

Aug. 2025 – Present

Co-leading and planning weekly sessions for 30+ first-year CS students; delivering technical workshops on Git, web development, and mathematical concepts in CS; collaborating with faculty to create student support initiatives

SKILLS

Languages & Databases: Java, Python, Kotlin, TypeScript, JavaScript, SQL, PostgreSQL, C

Frameworks, Tools & AI: React, Next.js, Express.js, Nest.js, Supabase, Tailwind CSS, Gemini API, Claude
